> *The transpose of conv2d.*

Function Signatures

```
tf.compat.v1.nn.conv2d_transpose( value=None, filter=None,
output_shape=None, strides=None, padding='SAME',
data_format='NHWC', name=None, input=None, filters=None,
dilations=None )
```

Code Examples

```
tf.compat.v1.nn.conv2d_transpose(
value=None,
filter=None,
output_shape=None,
strides=None,
padding='SAME',
data_format='NHWC',
name=None,
input=None,
filters=None,
dilations=None
)
```

```
tf.compat.v1.nn.conv2d_transpose(
value=None,
filter=None,
output_shape=None,
strides=None,
padding='SAME',
data_format='NHWC',
name=None,
input=None,
filters=None,
dilations=None
)
```

Documentation

The transpose of conv2d.

This operation is sometimes called "deconvolution" after
(Zeiler et al., 2010), but is really the transpose (gradient) of conv2d
rather than an actual deconvolution.
