> *Outputs the position of value in a permutation of [0, ..., max_index].*

Function Signatures

```
tf.random_index_shuffle( index: Annotated[Any,
TV_RandomIndexShuffle_dtype], seed: Annotated[Any,
TV_RandomIndexShuffle_Tseed], max_index: Annotated[Any,
TV_RandomIndexShuffle_dtype], rounds: int = 4, name=None ) ->
Annotated[Any, TV_RandomIndexShuffle_dtype]
```

Code Examples

```
tf.random_index_shuffle(
index: Annotated[Any, TV_RandomIndexShuffle_dtype],
seed: Annotated[Any, TV_RandomIndexShuffle_Tseed],
max_index: Annotated[Any, TV_RandomIndexShuffle_dtype],
rounds: int = 4,
name=None
) -> Annotated[Any, TV_RandomIndexShuffle_dtype]
```

```
tf.random_index_shuffle(
index: Annotated[Any, TV_RandomIndexShuffle_dtype],
seed: Annotated[Any, TV_RandomIndexShuffle_Tseed],
max_index: Annotated[Any, TV_RandomIndexShuffle_dtype],
rounds: int = 4,
name=None
) -> Annotated[Any, TV_RandomIndexShuffle_dtype]
```

Documentation

Outputs the position of value in a permutation of [0, ..., max_index].

Migration guide for
more details.

tf.compat.v1.random_index_shuffle

Output values are a bijection of the index for any combination and seed and max_index.

If multiple inputs are vectors (matrix in case of seed) then the size of the
first dimension must match.

The outputs are deterministic.
