# Mish#

https://pytorch.org/docs/stable/generated/torch.nn.Mish.html

**Description:**

Applies the Mish function, element-wise. Mish: A Self Regularized Non-Monotonic Neural Activation Function. See Mish: A Self Regularized Non-Monotonic Neural Activation Function Input: $(*)$(*)$(*)$, where $*$*$*$ means any number of dimensions.

## Function Signature

```
class torch.nn.Mish(inplace=False)[source]#
Shape:
extra_repr()[source]#
Return type
forward(input)[source]#
```

**Returns:**

Tensor

## Code Examples

```
>>> m = nn.Mish()
>>> input = torch.randn(2)
>>> output = m(input)
```

## Notes & Warnings

**NOTE** Note See Mish: A Self Regularized Non-Monotonic Neural Activation Function

## Detailed Documentation

### Documentation

Applies the Mish function, element-wise.

Mish: A Self Regularized Non-Monotonic Neural Activation Function.

See Mish: A Self Regularized Non-Monotonic Neural Activation Function

Input: $(*)$(*)$(*)$, where $*$*$*$ means any number of dimensions.

Output: $(*)$(*)$(*)$, same shape as the input.

Return the extra representation of the module.

Runs the forward pass.

Applies the Mish function, element-wise.

Mish: A Self Regularized Non-Monotonic Neural Activation Function.

See Mish: A Self Regularized Non-Monotonic Neural Activation Function

Input: (∗)(*)(∗), where ∗*∗ means any number of dimensions.

Input: (∗)(*)(∗), where ∗*∗ means any number of dimensions.

Output: (∗)(*)(∗), same shape as the input.

Output: (∗)(*)(∗), same shape as the input.

Return the extra representation of the module.

Runs the forward pass.
