> *Computes the gradients of convolution with respect to the filter.*

Code Examples

```
tf.conv2d_backprop_filter_v2(
input: Annotated[Any, TV_Conv2DBackpropFilterV2_T],
filter: Annotated[Any, TV_Conv2DBackpropFilterV2_T],
out_backprop: Annotated[Any, TV_Conv2DBackpropFilterV2_T],
strides,
padding: str,
use_cudnn_on_gpu: bool = True,
explicit_paddings=[],
data_format: str = 'NHWC',
dilations=[1, 1, 1, 1],
name=None
) -> Annotated[Any, TV_Conv2DBackpropFilterV2_T]
```

```
tf.conv2d_backprop_filter_v2(
input: Annotated[Any, TV_Conv2DBackpropFilterV2_T],
filter: Annotated[Any, TV_Conv2DBackpropFilterV2_T],
out_backprop: Annotated[Any, TV_Conv2DBackpropFilterV2_T],
strides,
padding: str,
use_cudnn_on_gpu: bool = True,
explicit_paddings=[],
data_format: str = 'NHWC',
dilations=[1, 1, 1, 1],
name=None
) -> Annotated[Any, TV_Conv2DBackpropFilterV2_T]
```

Documentation

Computes the gradients of convolution with respect to the filter.
