tf.compat.v1.data.experimental.Counter Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/data/experimental/Counter

> *Creates a Dataset that counts from start in steps of size step. (deprecated)*

Function Signatures

```
tf.compat.v1.data.experimental.Counter( start=0, step=1,
dtype=tf.dtypes.int64 )
```

Code Examples

```
tf.compat.v1.data.experimental.Counter(
start=0,
step=1,
dtype=tf.dtypes.int64
)
```

```
tf.compat.v1.data.experimental.Counter(
start=0,
step=1,
dtype=tf.dtypes.int64
)
```

```
tf.dtypes.int64
```

```
dataset = tf.data.experimental.Counter().take(5)
list(dataset.as_numpy_iterator())
[0, 1, 2, 3, 4]
dataset.element_spec
TensorSpec(shape=(), dtype=tf.int64, name=None)
dataset = tf.data.experimental.Counter(dtype=tf.int32)
dataset.element_spec
TensorSpec(shape=(), dtype=tf.int32, name=None)
dataset = tf.data.experimental.Counter(start=2).take(5)
list(dataset.as_numpy_iterator())
[2, 3, 4, 5, 6]
dataset = tf.data.experimental.Counter(start=2, step=5).take(5)
list(dataset.as_numpy_iterator())
[2, 7, 12, 17, 22]
dataset = tf.data.experimental.Counter(start=10, step=-1).take(5)
list(dataset.as_numpy_iterator())
[10, 9, 8, 7, 6]
```

```
dataset = tf.data.experimental.Counter().take(5)
```

```
list(dataset.as_numpy_iterator())
```

```
[0, 1, 2, 3, 4]
```

```
dataset.element_spec
```

Documentation

Creates a Dataset that counts from start in steps of size step. (deprecated)

Unlike tf.data.Dataset.range which will stop at some ending number,
Counter will produce elements indefinitely.

Returns
