torch.nn.functional.unfold#

https://pytorch.org/docs/stable/generated/torch.nn.functional.unfold.html

Description:

Extract sliding local blocks from a batched input tensor. Currently, only 4-D input tensors (batched image-like tensors) are supported. More than one element of the unfolded tensor may refer to a single memory location. As a result, in-place operations (especially ones that are vectorized) may result in incorrect behavior. If you need to write to the tensor, please clone it first.

Function Signature

```
torch.nn.functional.unfold(input, kernel_size, dilation=1,
padding=0, stride=1)[source]#

Return type
```

Returns:

Tensor

Notes & Warnings

⚠ **WARNING**

Warning Currently, only 4-D input tensors (batched image-like tensors) are supported.

⚠ **WARNING**

Warning More than one element of the unfolded tensor may refer to a single memory location. As a result, in-place operations (especially ones that are vectorized) may result in incorrect behavior. If you need to write to the tensor, please clone it first.

Detailed Documentation

Documentation

Extract sliding local blocks from a batched input tensor.

Currently, only 4-D input tensors (batched image-like tensors) are supported.

More than one element of the unfolded tensor may refer to a single memory location. As a result, in-place operations (especially ones that are vectorized) may result in incorrect behavior. If you need to write to the tensor, please clone it first.

See torch.nn.Unfold for details

Extract sliding local blocks from a batched input tensor.

Currently, only 4-D input tensors (batched image-like tensors) are supported.

More than one element of the unfolded tensor may refer to a single memory location. As a result, in-place operations (especially ones that are vectorized) may result in incorrect behavior. If you need to write to the tensor, please clone it first.
