> *Computes acos of x element-wise.*

Function Signatures

```
tf.compat.v1.math.acos( x, name=None )
y = tf.math.cos(x)
x = tf.math.acos(y)
```

Code Examples

```
tf.compat.v1.math.acos(
x, name=None
)
```

```
tf.compat.v1.math.acos(
x, name=None
)
```

```
x = tf.constant([1.0, -0.5, 3.4, 0.2, 0.0, -2], dtype = tf.float32)
tf.math.acos(x)
```

```
x = tf.constant([1.0, -0.5, 3.4, 0.2, 0.0, -2], dtype = tf.float32)
```

```
tf.math.acos(x)
```

```
numpy= array([0. , 2.0943952, nan, 1.3694383, 1.5707964, nan],
```

```
dtype=float32)>
```

Documentation

Computes acos of x element-wise.

Provided an input tensor, the tf.math.acos operation
returns the inverse cosine of each element of the tensor.
If y = tf.math.cos(x) then, x = tf.math.acos(y).

Input range is [-1, 1] and the output has a range of [0, pi].

For example:

Returns
