torch.sub#

https://pytorch.org/docs/stable/generated/torch.sub.html#torch.sub

Description:

Subtracts other, scaled by alpha, from input. Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs. input (Tensor) – the input tensor. other (Tensor or Number) – the tensor or number to subtract from input. alpha (Number) – the multiplier for other.

Function Signature

```
torch.sub(input, other, *, alpha=1, out=None) → Tensor#
Parameters
Keyword Arguments
```

Parameters

`Keyword`

alpha (Number) – the multiplier for other. out (Tensor, optional) – the output tensor.

Code Examples

```
>>> a = torch.tensor((1, 2))
>>> b = torch.tensor((0, 1))
>>> torch.sub(a, b, alpha=2)
tensor([1, 0])
```

Detailed Documentation

Documentation

Subtracts other, scaled by alpha, from input.

Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs.

input (Tensor) – the input tensor.

other (Tensor or Number) – the tensor or number to subtract from input.

alpha (Number) – the multiplier for other.

out (Tensor, optional) – the output tensor.

Subtracts other, scaled by alpha, from input.

Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs.

input (Tensor) – the input tensor.

input (Tensor) – the input tensor.

other (Tensor or Number) – the tensor or number to subtract from input.

other (Tensor or Number) – the tensor or number to subtract from input.

alpha (Number) – the multiplier for other.

alpha (Number) – the multiplier for other.

out (Tensor, optional) – the output tensor.

out (Tensor, optional) – the output tensor.
