https://www.tensorflow.org/api_docs/python/tf/compat/v1/image/resize

> *Resize images to size using the specified method.*

Function Signatures

```
tf.compat.v1.image.resize( images, size,
method=ResizeMethodV1.BILINEAR, align_corners=False,
preserve_aspect_ratio=False, name=None )
```

Code Examples

```
tf.compat.v1.image.resize(
images,
size,
method=ResizeMethodV1.BILINEAR,
align_corners=False,
preserve_aspect_ratio=False,
name=None
)
```

```
tf.compat.v1.image.resize(
images,
size,
method=ResizeMethodV1.BILINEAR,
align_corners=False,
preserve_aspect_ratio=False,
name=None
)
```

Documentation

Resize images to size using the specified method.

tf.compat.v1.image.resize_images

Used in the notebooks

• Classify Flowers with Transfer Learning

Resized images will be distorted if their original aspect ratio is not the same as size. To avoid distortions see tf.image.resize_with_pad or tf.image.resize_with_crop_or_pad.

The method can be one of:

- tf.image.ResizeMethod.BILINEAR: Bilinear interpolation.
- tf.image.ResizeMethod.NEAREST_NEIGHBOR:

Nearest neighbor interpolation.

- tf.image.ResizeMethod.BICUBIC: Bicubic interpolation.
- tf.image.ResizeMethod.AREA: Area interpolation.

The return value has the same type as images if method is tf.image.ResizeMethod.NEAREST_NEIGHBOR. It will also have the same type as images if the size of images can be statically determined to be the same as size, because images is returned in this case. Otherwise, the return value has type float32.
