Buffer#

https://pytorch.org/docs/stable/generated/torch.nn.parameter.Buffer.html

Description:

A kind of Tensor that should not be considered a model parameter. For example, BatchNorm's running_mean is not a parameter, but is part of the module's state. Buffers are Tensor subclasses, that have a very special property when used with Module s – when they're assigned as Module attributes they are automatically added to the list of its buffers, and will appear e.g. in buffers() iterator. Assigning a Tensor doesn't have such effect. One can still assign a Tensor as explicitly by using the register_buffer() function. data (Tensor) – buffer tensor. persistent (bool, optional) – whether the buffer is part of the module's state_dict. Default: True

Function Signature

```
class torch.nn.parameter.Buffer(data=None, *,
persistent=True)[source]#

Parameters
```

Detailed Documentation

Documentation

A kind of Tensor that should not be considered a model parameter. For example, BatchNorm's running_mean is not a parameter, but is part of the module's state.

Buffers are Tensor subclasses, that have a very special property when used with Module s – when they're assigned as Module attributes they are automatically added to the list of its buffers, and will appear e.g. in buffers() iterator. Assigning a Tensor doesn't have such effect. One can still assign a Tensor as explicitly by using the register_buffer() function.

data (Tensor) – buffer tensor.

persistent (bool, optional) – whether the buffer is part of the module's state_dict. Default: True
