torch.split#

https://pytorch.org/docs/stable/generated/torch.split.html

Description:

Splits the tensor into chunks. Each chunk is a view of the original tensor. If split_size_or_sections is an integer type, then tensor will be split into equally sized chunks (if possible). Last chunk will be smaller if the tensor size along the given dimension dim is not divisible by split_size. If split_size_or_sections is a list, then tensor will be split into len(split_size_or_sections) chunks with sizes in dim according to split_size_or_sections. tensor (Tensor) – tensor to split. split_size_or_sections (int) or (list(int)) – size of a single chunk or list of sizes for each chunk

Function Signature

```
torch.split(tensor, split_size_or_sections, dim=0)[source]#
Parameters
Return type
```

Returns:

tuple[torch.Tensor, …]

Code Examples

```
>>> a = torch.arange(10).reshape(5, 2)
>>> a
tensor([[0, 1],
        [2, 3],
        [4, 5],
        [6, 7],
        [8, 9]])
>>> torch.split(a, 2)
(tensor([[0, 1],
         [2, 3]]),
 tensor([[4, 5],
         [6, 7]]),
 tensor([[8, 9]]))
>>> torch.split(a, [1, 4])
(tensor([[0, 1]]),
 tensor([[2, 3],
         [4, 5],
         [6, 7],
         [8, 9]]))
```

Detailed Documentation

Documentation

Splits the tensor into chunks. Each chunk is a view of the original tensor.

If split_size_or_sections is an integer type, then tensor will be split into equally sized chunks (if possible). Last chunk will be smaller if the tensor size along the given dimension dim is not divisible by split_size.

If split_size_or_sections is a list, then tensor will be split into len(split_size_or_sections) chunks with sizes in dim according to split_size_or_sections.

tensor (Tensor) – tensor to split.

split_size_or_sections (int) or (list(int)) – size of a single chunk or list of sizes for each chunk

dim (int) – dimension along which to split the tensor.

tuple[torch.Tensor, …]
