> *Interleave the values from the data tensors into a single tensor.*

Function Signatures

```
tf.dynamic_stitch( indices: Annotated[List[Any],
_atypes.Int32], data: Annotated[List[Any],
TV_DynamicStitch_T], name=None ) -> Annotated[Any,
TV_DynamicStitch_T]
```

Code Examples

```
tf.dynamic_stitch(
indices: Annotated[List[Any], _atypes.Int32],
data: Annotated[List[Any], TV_DynamicStitch_T],
name=None
) -> Annotated[Any, TV_DynamicStitch_T]
```

```
tf.dynamic_stitch(
indices: Annotated[List[Any], _atypes.Int32],
data: Annotated[List[Any], TV_DynamicStitch_T],
name=None
) -> Annotated[Any, TV_DynamicStitch_T]
```

```
merged[indices[m][i, ..., j], ...] = data[m][i, ..., j, ...]
```

```
merged[indices[m][i, ..., j], ...] = data[m][i, ..., j, ...]
```

```
# Scalar indices:
merged[indices[m], ...] = data[m][...]
# Vector indices:
merged[indices[m][i], ...] = data[m][i, ...]
```

```
# Scalar indices:
merged[indices[m], ...] = data[m][...]
# Vector indices:
merged[indices[m][i], ...] = data[m][i, ...]
```

```
merged.shape = [max(indices) + 1] + constant
```

```
merged.shape = [max(indices) + 1] + constant
```

Documentation

Interleave the values from the data tensors into a single tensor.

tf.compat.v1.dynamic_stitch

Builds a merged tensor such that

For example, if each indices[m] is scalar or vector, we have

Each data[i].shape must start with the corresponding indices[i].shape,
and the rest of data[i].shape must be constant w.r.t. i. That is, we
must have data[i].shape = indices[i].shape + constant. In terms of this
constant, the output shape is

Values are merged in order, so if an index appears in both indices[m][i] and
indices[n][j] for (m,i) < (n,j) the slice data[n][j] will appear in the
merged result. If you do not need this guarantee, ParallelDynamicStitch might
perform better on some devices.

For example:

This method can be used to merge partitions created by dynamic_partition
as illustrated on the following example:

Returns
