

tf.autograph.to_code Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/autograph/to_code

Returns the source code generated by AutoGraph, as a string.

Function Signatures

```
tf.autograph.to_code( entity, recursive=True,  
experimental_optional_features=None )  
def f(x):
```

Code Examples

```
tf.autograph.to_code(  
entity, recursive=True, experimental_optional_features=None  
)
```

```
tf.autograph.to_code(  
entity, recursive=True, experimental_optional_features=None  
)
```

```
def f(x):  
    if x < 0:  
        x = -x  
    return x  
tf.autograph.to_code(f)  
"...def tf__f(x):..."
```

```
tf.autograph.to_code(f)
```

Documentation

Returns the source code generated by AutoGraph, as a string.

Used in the notebooks

- Better performance with `tf.function`
- Introduction to graphs and `tf.function`

Example usage:

Also see: `tf.autograph.to_graph`.

Returns
