https://www.tensorflow.org/api_docs/python/tf/autograph/trace

Traces argument information at compilation time.

Function Signatures

```
tf.autograph.trace( *args )  
import tensorflow as tf for i in tf.range(10):  
    tf.autograph.trace(i) # Output:
```

Code Examples

```
tf.autograph.trace(  
    *args  
)
```

```
tf.autograph.trace(  
    *args  
)
```

```
import tensorflow as tf  
for i in tf.range(10):  
    tf.autograph.trace(i)  
# Output:
```

```
import tensorflow as tf  
for i in tf.range(10):  
    tf.autograph.trace(i)  
# Output:
```

`tf.compat.v1.autograph.trace`

`trace` is useful when debugging, and it always executes during the tracing phase, that is, when the TF graph is constructed.

Example usage
