`as_bytes(...)`

Documentation

Public API for tf._api.v2.compat namespace

Modules

v1 module: Bring in all of the public TensorFlow interface into this module.

Functions

`as_bytes(...)`: Converts bytearray, bytes, or unicode python input types to bytes.

`as_str(...)`

`as_str_any(...)`: Converts input to str type.

`as_text(...)`: Converts any string-like python input types to unicode.

`dimension_at_index(...)`: Compatibility utility required to allow for both V1 and V2 behavior in TF.

`dimension_value(...)`: Compatibility utility required to allow for both V1 and V2 behavior in TF.

`forward_compatibility_horizon(...)`: Context manager for testing forward compatibility of generated graphs.

`forward_compatible(...)`: Return true if the forward compatibility window has expired.

`path_to_str(...)`: Converts input which is a PathLike object to str type.
