

tf.compat.v1.argmax Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/argmin

*Returns the index with the smallest value across axes of a tensor.
(deprecated arguments)*

Function Signatures

```
tf.compat.v1.argmax( input, axis=None, name=None,  
dimension=None, output_type=tf.dtypes.int64 )  
(dimension)
```

Code Examples

```
tf.compat.v1.argmin(  
    input,  
    axis=None,  
    name=None,  
    dimension=None,  
    output_type=tf.dtypes.int64  
)
```

```
tf.compat.v1.argmin(  
    input,  
    axis=None,  
    name=None,  
    dimension=None,  
    output_type=tf.dtypes.int64  
)
```

```
tf.dtypes.int64
```

```
import tensorflow as tf  
a = [1, 10, 26.9, 2.8, 166.32, 62.3]  
b = tf.math.argmin(input = a)  
c = tf.keras.backend.eval(b)  
# c = 0  
# here a[0] = 1 which is the smallest element of a across axis 0
```

```
import tensorflow as tf  
a = [1, 10, 26.9, 2.8, 166.32, 62.3]  
b = tf.math.argmin(input = a)  
c = tf.keras.backend.eval(b)  
# c = 0  
# here a[0] = 1 which is the smallest element of a across axis 0
```

Documentation

Returns the index with the smallest value across axes of a tensor. (deprecated arguments)
