https://www.tensorflow.org/api_docs/python/tf/compat/v1/assert_positive

Assert the condition $x > 0$ holds element-wise.

Function Signatures

```
tf.compat.v1.assert_positive( x, data=None, summarize=None,
message=None, name=None )
with tf.control_dependencies([tf.debugging.assert_positive(x,
y)]): output = tf.reduce_sum(x)
```

Code Examples

```
tf.compat.v1.assert_positive(  
x, data=None, summarize=None, message=None, name=None  
)
```

```
tf.compat.v1.assert_positive(  
x, data=None, summarize=None, message=None, name=None  
)
```

```
with tf.control_dependencies([tf.debugging.assert_positive(x, y)]):  
output = tf.reduce_sum(x)
```

```
with tf.control_dependencies([tf.debugging.assert_positive(x, y)]):  
output = tf.reduce_sum(x)
```

Documentation

Assert the condition $x > 0$ holds element-wise.

`tf.compat.v1.debugging.assert_positive`

When running in graph mode, you should add a dependency on this operation to ensure that it runs. Example of adding a dependency to an operation:

Positive means, for every element $x[i]$ of x , we have $x[i] > 0$.

If x is empty this is trivially satisfied.

Returns

Raises

eager compatibility

returns None
