https://www.tensorflow.org/api_docs/python/tf/compat/v1/bincount

Counts the number of occurrences of each value in an integer array.

Function Signatures

```
tf.compat.v1.bincount( arr, weights=None, minlength=None,  
maxlength=None, dtype=tf.dtypes.int32 )
```

Code Examples

```
tf.compat.v1.bincount(  
arr,  
weights=None,  
minlength=None,  
maxlength=None,  
dtype=tf.dtypes.int32  
)
```

```
tf.compat.v1.bincount(  
arr,  
weights=None,  
minlength=None,  
maxlength=None,  
dtype=tf.dtypes.int32  
)
```

```
tf.dtypes.int32
```

Documentation

Counts the number of occurrences of each value in an integer array.

`tf.compat.v1.math.bincount`

If `minlength` and `maxlength` are not given, returns a vector with length `tf.reduce_max(arr) + 1` if `arr` is non-empty, and length 0 otherwise.

If `weights` are non-None, then index `i` of the output stores the sum of the value in `weights` at each index where the corresponding value in `arr` is `i`.

Returns
