

tf.compat.v1.decode_csv Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/decode_csv

Convert CSV records to tensors. Each column maps to one tensor.

Function Signatures

```
tf.compat.v1.decode_csv( records, record_defaults,  
field_delim=',', use_quote_delim=True, name=None,  
na_value='', select_cols=None )
```

Code Examples

```
tf.compat.v1.decode_csv(  
    records,  
    record_defaults,  
    field_delim=',',  
    use_quote_delim=True,  
    name=None,  
    na_value='',  
    select_cols=None  
)
```

```
tf.compat.v1.decode_csv(  
    records,  
    record_defaults,  
    field_delim=',',  
    use_quote_delim=True,  
    name=None,  
    na_value='',  
    select_cols=None  
)
```

Documentation

Convert CSV records to tensors. Each column maps to one tensor.
