---

*Disables TensorFlow 2.x behaviors.*

## Function Signatures

---

```
tf.compat.v1.disable_v2_behavior()
```

## Code Examples

---

```
tf.compat.v1.disable_v2_behavior()
```

```
tf.compat.v1.disable_v2_behavior()
```

# Documentation

---

Disables TensorFlow 2.x behaviors.

## Migrate to TF2

Using this function indicates that your software is not compatible with eager execution and `tf.function` in TF2.

To migrate to TF2, rewrite your code to be compatible with eager execution. Please refer to the migration guide for additional resource on the topic.

## Description

## Used in the notebooks

- Generating Images with BigBiGAN
- Generating Images with BigGAN
- Classify Flowers with Transfer Learning
- Generating Images with Little Data Using S3GAN
- Universal Sentence Encoder-Lite demo

This function can be called at the beginning of the program (before Tensors, Graphs or other structures have been created, and before devices have been initialized. It switches all global behaviors that are different between TensorFlow 1.x and 2.x to behave as intended for 1.x.

User can call this function to disable 2.x behavior during complex migrations.
