https://www.tensorflow.org/api_docs/python/tf/compat/v1/enable_tensor_equality

Compare Tensors with element-wise comparison and thus be unhashable.

Function Signatures

```
tf.compat.v1.enable_tensor_equality()
```

Code Examples

```
tf.compat.v1.enable_tensor_equality()
```

```
tf.compat.v1.enable_tensor_equality()
```

Documentation

Compare Tensors with element-wise comparison and thus be unhashable.

Used in the notebooks

- TensorFlow 1.x vs TensorFlow 2 - Behaviors and APIs

Comparing tensors with element-wise allows comparisons such as `tf.Variable(1.0) == 1.0`. Element-wise equality implies that tensors are unhashable. Thus tensors can no longer be directly used in sets or as a key in a dictionary.
