https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/DEFINE_enum

Registers a flag whose value can be any string from `enum_values`.

Function Signatures

```
tf.compat.v1.flags.DEFINE_enum( name, default, enum_values,
help, flag_values=_flagvalues.FLAGS, module_name=None,
required=False, **args )
```

Code Examples

```
tf.compat.v1.flags.DEFINE_enum(  
    name,  
    default,  
    enum_values,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    module_name=None,  
    required=False,  
    **args  
)
```

```
tf.compat.v1.flags.DEFINE_enum(  
    name,  
    default,  
    enum_values,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    module_name=None,  
    required=False,  
    **args  
)
```

Documentation

Registers a flag whose value can be any string from `enum_values`.

Instead of a string enum, prefer `DEFINE_enum_class`, which allows defining enums from an `enum.Enum` class.

Returns
