https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/DEFINE_multi_enum

Registers a flag whose value can be a list strings from enum_values.

Function Signatures

```
tf.compat.v1.flags.DEFINE_multi_enum( name, default,
enum_values, help, flag_values=_flagvalues.FLAGS,
case_sensitive=True, required=False, **args )
```

Code Examples

```
tf.compat.v1.flags.DEFINE_multi_enum(  
    name,  
    default,  
    enum_values,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    case_sensitive=True,  
    required=False,  
    **args  
)
```

```
tf.compat.v1.flags.DEFINE_multi_enum(  
    name,  
    default,  
    enum_values,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    case_sensitive=True,  
    required=False,  
    **args  
)
```

Documentation

Registers a flag whose value can be a list strings from `enum_values`.

Use the flag on the command line multiple times to place multiple enum values into the list. The 'default' may be a single string (which will be converted into a single-element list) or a list of strings.

Returns
