https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/DEFINE_multi_string

Registers a flag whose value can be a list of any strings.

Function Signatures

```
tf.compat.v1.flags.DEFINE_multi_string( name, default, help,
flag_values=_flagvalues.FLAGS, required=False, **args )
```

Code Examples

```
tf.compat.v1.flags.DEFINE_multi_string(
name, default, help, flag_values=_flagvalues.FLAGS, required=False,
**args
)
```

```
tf.compat.v1.flags.DEFINE_multi_string(
name, default, help, flag_values=_flagvalues.FLAGS, required=False,
**args
)
```

Documentation

Registers a flag whose value can be a list of any strings.

Use the flag on the command line multiple times to place multiple string values into the list. The 'default' may be a single string (which will be converted into a single-element list) or a list of strings.

Returns
