https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/declare_key_flag

Declares one flag as key to the current module.

Function Signatures

```
tf.compat.v1.flags.declare_key_flag( flag_name: Union[Text,
tf.compat.v1.flags.FlagHolder], flag_values:
tf.compat.v1.flags.FlagValues = _flagvalues.FLAGS ) -> None
flags.declare_key_flag('flag_1')
```

Code Examples

```
tf.compat.v1.flags.declare_key_flag(  
    flag_name: Union[Text, tf.compat.v1.flags.FlagHolder],  
    flag_values: tf.compat.v1.flags.FlagValues = _flagvalues.FLAGS  
) -> None
```

```
tf.compat.v1.flags.declare_key_flag(  
    flag_name: Union[Text, tf.compat.v1.flags.FlagHolder],  
    flag_values: tf.compat.v1.flags.FlagValues = _flagvalues.FLAGS  
) -> None
```

```
tf.compat.v1.flags.FlagHolder
```

```
tf.compat.v1.flags.FlagValues
```

```
flags.declare_key_flag('flag_1')
```

```
flags.declare_key_flag('flag_1')
```

Documentation

Declares one flag as key to the current module.

Key flags are flags that are deemed really important for a module. They are important when listing help messages; e.g., if the `--helpshort` command-line flag is used, then only the key flags of the main module are listed (instead of all flags, as in the case of `--helpfull`).

Sample usage::

Raises
