https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/text_wrap

Wraps a given text to a maximum line length and returns it.

Function Signatures

```
tf.compat.v1.flags.text_wrap( text: str, length:
Optional[int] = None, indent: str = '', firstline_indent:
Optional[str] = None ) -> str
```

Code Examples

```
tf.compat.v1.flags.text_wrap(  
text: str,  
length: Optional[int] = None,  
indent: str = '',  
firstline_indent: Optional[str] = None  
) -> str
```

```
tf.compat.v1.flags.text_wrap(  
text: str,  
length: Optional[int] = None,  
indent: str = '',  
firstline_indent: Optional[str] = None  
) -> str
```

Documentation

Wraps a given text to a maximum line length and returns it.

It turns lines that only contain whitespace into empty lines, keeps new lines, and expands tabs using 4 spaces.

Returns

Raises
