

tf.compat.v1.gfile.Copy Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/gfile/Copy

Copies data from src to dst.

Function Signatures

```
tf.compat.v1.gfile.Copy( oldpath, newpath, overwrite=False )  
with open("/tmp/x", "w") as f:  
    f.write("asdf")
```

Code Examples

```
tf.compat.v1.gfile.Copy(  
oldpath, newpath, overwrite=False  
)
```

```
tf.compat.v1.gfile.Copy(  
oldpath, newpath, overwrite=False  
)
```

```
with open("/tmp/x", "w") as f:  
    f.write("asdf")  
4  
tf.io.gfile.exists("/tmp/x")  
True  
tf.io.gfile.copy("/tmp/x", "/tmp/y")  
tf.io.gfile.exists("/tmp/y")  
True  
tf.io.gfile.remove("/tmp/y")
```

```
with open("/tmp/x", "w") as f:
```

```
    f.write("asdf")
```

```
tf.io.gfile.exists("/tmp/x")
```

Documentation

Copies data from src to dst.

You can also specify the URI scheme for selecting a different filesystem:

Note that you need to always specify a file name, even if moving into a new directory. This is because some cloud filesystems don't have the concept of a directory.

If you want to prevent errors if the path already exists, you can use `overwrite` argument:

Note that the above will still result in an error if you try to overwrite a directory with a file.

Note that you cannot copy a directory, only file arguments are supported.
