https://www.tensorflow.org/api_docs/python/tf/compat/v1/graph_util

Public API for `tf._api.v2.graph_util` namespace

Function Signatures

```
convert_variables_to_constants(...)  
extract_sub_graph(...)  
import_graph_def(...)
```

Documentation

Public API for `tf._api.v2.graph_util` namespace

Functions

`convert_variables_to_constants(...)`: Replaces all the variables in a graph with constants of the same values. (deprecated)

`extract_sub_graph(...)`: Extract the subgraph that can reach any of the nodes in 'dest_nodes'. (deprecated)

`import_graph_def(...)`: Imports the graph from `graph_def` into the current default Graph. (deprecated arguments)

`must_run_on_cpu(...)`: Returns True if the given `node_def` must run on CPU, otherwise False. (deprecated)

`remove_training_nodes(...)`: Prunes out nodes that aren't needed for inference. (deprecated)

`tensor_shape_from_node_def_name(...)`: Convenience function to get a shape from a `NodeDef`'s input string. (deprecated)
