https://www.tensorflow.org/api_docs/python/tf/compat/v1/graph_util/convert_variables_to_constants

*Replaces all the variables in a graph with constants of the same values.
(deprecated)*

Function Signatures

```
tf.compat.v1.graph_util.convert_variables_to_constants( sess,  
input_graph_def, output_node_names,  
variable_names_whitelist=None, variable_names_blacklist=None  
)
```

Code Examples

```
tf.compat.v1.graph_util.convert_variables_to_constants(  
    sess,  
    input_graph_def,  
    output_node_names,  
    variable_names_whitelist=None,  
    variable_names_blacklist=None  
)
```

```
tf.compat.v1.graph_util.convert_variables_to_constants(  
    sess,  
    input_graph_def,  
    output_node_names,  
    variable_names_whitelist=None,  
    variable_names_blacklist=None  
)
```

Documentation

Replaces all the variables in a graph with constants of the same values.
(deprecated)

If you have a trained graph containing Variable ops, it can be convenient to convert them all to Const ops holding the same values. This makes it possible to describe the network fully with a single GraphDef file, and allows the removal of a lot of ops related to loading and saving the variables.
