https://www.tensorflow.org/api_docs/python/tf/compat/v1/hessians

Constructs the Hessian of sum of ys with respect to x in xs.

Function Signatures

```
tf.compat.v1.hessians( ys, xs, name='hessians',  
colocate_gradients_with_ops=False, gate_gradients=False,  
aggregation_method=None )  
hessians()
```

Code Examples

```
tf.compat.v1.hessians(  
    ys,  
    xs,  
    name='hessians',  
    colocate_gradients_with_ops=False,  
    gate_gradients=False,  
    aggregation_method=None  
)
```

```
tf.compat.v1.hessians(  
    ys,  
    xs,  
    name='hessians',  
    colocate_gradients_with_ops=False,  
    gate_gradients=False,  
    aggregation_method=None  
)
```

Documentation

Constructs the Hessian of sum of y s with respect to x in x s.

`hessians()` adds ops to the graph to output the Hessian matrix of y s with respect to x s. It returns a list of Tensor of length `len(xs)` where each tensor is the Hessian of `sum(ys)`.

The Hessian is a matrix of second-order partial derivatives of a scalar tensor (see https://en.wikipedia.org/wiki/Hessian_matrix for more details).
