https://www.tensorflow.org/api_docs/python/tf/compat/v1/math/divide_no_nan

Computes a safe divide which returns 0 if y (denominator) is zero.

Function Signatures

```
tf.compat.v1.math.divide_no_nan( x, y, name=None )  
tf.constant(3.0) / 0.0  
tf.math.divide_no_nan(3.0, 0.0)
```

Code Examples

```
tf.compat.v1.math.divide_no_nan(  
x, y, name=None  
)
```

```
tf.compat.v1.math.divide_no_nan(  
x, y, name=None  
)
```

```
tf.constant(3.0) / 0.0  
  
tf.math.divide_no_nan(3.0, 0.0)
```

```
tf.constant(3.0) / 0.0
```

```
tf.math.divide_no_nan(3.0, 0.0)
```

```
tf.math.divide_no_nan(np.nan, 0.0)
```

Documentation

Computes a safe divide which returns 0 if y (denominator) is zero.

For example:

Note that 0 is returned if y is 0 even if x is nonfinite:

`## Returns`
