https://www.tensorflow.org/api_docs/python/tf/compat/v1/math/floor

Returns element-wise largest integer not greater than x.

Function Signatures

```
tf.compat.v1.math.floor( x, name=None )  
(-inf, inf)  
x = tf.constant([1.3324, -1.5, 5.555, -2.532, 0.99,  
float("inf")])  
tf.floor(x).numpy()  
array([ 1., -2., 5., -3., 0., inf], dtype=float32)
```

Code Examples

```
tf.compat.v1.math.floor(  
x, name=None  
)
```

```
tf.compat.v1.math.floor(  
x, name=None  
)
```

```
x = tf.constant([1.3324, -1.5, 5.555, -2.532, 0.99, float("inf")])  
tf.floor(x).numpy()  
array([ 1., -2.,  5., -3.,  0., inf], dtype=float32)
```

```
x = tf.constant([1.3324, -1.5, 5.555, -2.532, 0.99, float("inf")])
```

```
tf.floor(x).numpy()
```

```
array([ 1., -2.,  5., -3.,  0., inf], dtype=float32)
```

Documentation

Returns element-wise largest integer not greater than x.

Both input range is $(-\infty, \infty)$ and the output range consists of all integer values.

For example:

`## Returns`
