https://www.tensorflow.org/api_docs/python/tf/compat/v1/math/sqrt

Computes element-wise square root of the input tensor.

Function Signatures

```
tf.compat.v1.math.sqrt( x, name=None )  
x = tf.constant([[4.0], [16.0]])  
tf.sqrt(x)
```

Code Examples

```
tf.compat.v1.math.sqrt(  
    x, name=None  
)
```

```
tf.compat.v1.math.sqrt(  
    x, name=None  
)
```

```
x = tf.constant([[4.0], [16.0]])  
tf.sqrt(x)
```

```
y = tf.constant([[-4.0], [16.0]])  
tf.sqrt(y)
```

```
z = tf.constant([[-1.0], [16.0]], dtype=tf.complex128)  
tf.sqrt(z)
```

```
x = tf.constant([[4.0], [16.0]])
```

```
array([[2.],
```

```
[4.]], dtype=float32)>
```

Documentation

Computes element-wise square root of the input tensor.

Returns

If `x` is a `SparseTensor`, returns

`SparseTensor(x.indices, tf.math.sqrt(x.values, ...), x.dense_shape)`
