https://www.tensorflow.org/api_docs/python/tf/compat/v1/min_max_variable_partitioner

Partitioner to allocate minimum size per slice.

Function Signatures

```
tf.compat.v1.min_max_variable_partitioner( max_partitions=1,  
axis=0, min_slice_size=(256 << 10),  
bytes_per_string_element=16 )
```

Code Examples

```
tf.compat.v1.min_max_variable_partitioner(  
    max_partitions=1,  
    axis=0,  
    min_slice_size=(256 << 10),  
    bytes_per_string_element=16  
)
```

```
tf.compat.v1.min_max_variable_partitioner(  
    max_partitions=1,  
    axis=0,  
    min_slice_size=(256 << 10),  
    bytes_per_string_element=16  
)
```

Documentation

Partitioner to allocate minimum size per slice.

Returns a partitioner that partitions the variable of given shape and dtype such that each partition has a minimum of `min_slice_size` slice of the variable. The maximum number of such partitions (upper bound) is given by `max_partitions`.

Returns
