https://www.tensorflow.org/api_docs/python/tf/compat/v1/nn/fractional_avg_pool

Performs fractional average pooling on the input. (deprecated)

Function Signatures

```
tf.compat.v1.nn.fractional_avg_pool( value, pooling_ratio,  
pseudo_random=False, overlapping=False, deterministic=False,  
seed=0, seed2=0, name=None )
```

Code Examples

```
tf.compat.v1.nn.fractional_avg_pool(  
    value,  
    pooling_ratio,  
    pseudo_random=False,  
    overlapping=False,  
    deterministic=False,  
    seed=0,  
    seed2=0,  
    name=None  
)
```

```
tf.compat.v1.nn.fractional_avg_pool(  
    value,  
    pooling_ratio,  
    pseudo_random=False,  
    overlapping=False,  
    deterministic=False,  
    seed=0,  
    seed2=0,  
    name=None  
)
```

Documentation

Performs fractional average pooling on the input. (deprecated)

This is a deprecated version of `fractional_avg_pool`.

Fractional average pooling is similar to Fractional max pooling in the pooling region generation step. The only difference is that after pooling regions are generated, a mean operation is performed instead of a max operation in each pooling region.

Returns

A tuple of Tensor objects (output, row_pooling_sequence, col_pooling_sequence).

output: Output Tensor after fractional avg pooling. Has the same type as value.

row_pooling_sequence: A Tensor of type int64.

col_pooling_sequence: A Tensor of type int64.
