

tf.compat.v1.ragged.placeholder Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/ragged/placeholder

Creates a placeholder for a `tf.RaggedTensor` that will always be fed.

Function Signatures

```
tf.compat.v1.ragged.placeholder( dtype, ragged_rank,  
value_shape=None, name=None )
```

Code Examples

```
tf.compat.v1.ragged.placeholder(  
dtype, ragged_rank, value_shape=None, name=None  
)
```

```
tf.compat.v1.ragged.placeholder(  
dtype, ragged_rank, value_shape=None, name=None  
)
```

Documentation

Creates a placeholder for a `tf.RaggedTensor` that will always be fed.

Migrate to TF2

This API is not compatible with eager execution and `tf.function`. To migrate to TF2, rewrite the code to be compatible with eager execution. Check the migration

guide

on replacing `Session.run` calls. In TF2, you can just pass tensors directly into ops and layers. If you want to explicitly set up your inputs, also see Keras functional API on

how to use `tf.keras.Input` to replace `tf.compat.v1.ragged.placeholder`.

`tf.function` arguments also do the job of `tf.compat.v1.ragged.placeholder`.

For more details please read [Better performance with tf.function](#).
