https://www.tensorflow.org/api_docs/python/tf/compat/v1/report_uninitialized_variables

Adds ops to list the names of uninitialized variables.

Function Signatures

```
tf.compat.v1.report_uninitialized_variables( var_list=None,
name='report_uninitialized_variables' )
global_variables() + local_variables()
```

Code Examples

```
tf.compat.v1.report_uninitialized_variables(
var_list=None, name='report_uninitialized_variables'
)
```

```
tf.compat.v1.report_uninitialized_variables(
var_list=None, name='report_uninitialized_variables'
)
```

Documentation

Adds ops to list the names of uninitialized variables.

When run, it returns a 1-D tensor containing the names of uninitialized variables if there are any, or an empty array if there are none.

Returns
