main_op module: Public API for tf._api.v2.saved_model.main_op namespace

signature_constants module: Public API for tf._api.v2.saved_model.signature_constants namespace

signature_def_utils module: Public API for tf._api.v2.saved_model.signature_def_utils namespace

tag_constants module: Public API for tf._api.v2.saved_model.tag_constants namespace

utils module: Public API for tf._api.v2.saved_model.utils namespace

Classes

class Asset: Represents a file asset to hermetically include in a SavedModel.

class Builder: Builds the SavedModel protocol buffer and saves variables and assets.

class SaveOptions: Options for saving to SavedModel.

Functions

build_signature_def(...): Utility function to build a SignatureDef protocol buffer.

build_tensor_info(...): Utility function to build TensorInfo proto from a Tensor. (deprecated)

classification_signature_def(...): Creates classification signature from given examples and predictions.

contains_saved_model(...): Checks whether the provided export directory could contain a SavedModel.

get_tensor_from_tensor_info(...): Returns the Tensor or CompositeTensor described by a TensorInfo proto. (deprecated)

is_valid_signature(...): Determine whether a SignatureDef can be served by TensorFlow Serving.

load(...): Loads the model from a SavedModel as specified by tags. (deprecated)

load_v2(...): Load a SavedModel from export_dir.

main_op_with_restore(...): Returns a main op to init variables, tables and restore

the graph. (deprecated)

`maybe_saved_model_directory(...)`: Checks whether the provided export directory could contain a `SavedModel`.

`predict_signature_def(...)`: Creates prediction signature from given inputs and outputs.

`regression_signature_def(...)`: Creates regression signature from given examples and predictions.

`save(...)`: Exports a `tf.Module` (and subclasses) obj to `SavedModel` format.

`simple_save(...)`: Convenience function to build a `SavedModel` suitable for serving. (deprecated)
