

tf.compat.v1.saved_model.load Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/saved_model/load

Loads the model from a SavedModel as specified by tags. (deprecated)

Function Signatures

```
tf.compat.v1.saved_model.load( sess, tags, export_dir,  
import_scope=None, **saver_kwargs )
```

Code Examples

```
tf.compat.v1.saved_model.load(  
    sess, tags, export_dir, import_scope=None, **saver_kwargs  
)
```

```
tf.compat.v1.saved_model.load(  
    sess, tags, export_dir, import_scope=None, **saver_kwargs  
)
```

```
with tf.compat.v1.Session(graph=tf.Graph()) as sess:  
    tf.compat.v1.saved_model.loader.load(sess, ["foo-tag"], export_dir)
```

```
with tf.compat.v1.Session(graph=tf.Graph()) as sess:  
    tf.compat.v1.saved_model.loader.load(sess, ["foo-tag"], export_dir)
```

```
model = tf.saved_model.load(export_dir, tags=["foo-tag"])
```

```
model = tf.saved_model.load(export_dir, tags=["foo-tag"])
```

Documentation

Loads the model from a SavedModel as specified by tags. (deprecated)

Migration guide for
more details.

`tf.compat.v1.saved_model.loader.load`

Migrate to TF2

`tf.compat.v1.saved_model.load` or `tf.compat.v1.saved_model.loader.load` is not compatible with eager execution. Please use `tf.saved_model.load` instead to load your model. You can refer to the SavedModel guide for more information as well as

"Importing SavedModels from TensorFlow 1.x" in the `tf.saved_model.load` docstring.
