https://www.tensorflow.org/api_docs/python/tf/compat/v1/shape

Returns the shape of a tensor.

Function Signatures

```
tf.compat.v1.shape( input, name=None, out_type=None )  
t = tf.constant([[[1, 1, 1], [2, 2, 2]], [[3, 3, 3], [4, 4, 4]]]) tf.shape(t) # [2, 2, 3]
```

Code Examples

```
tf.compat.v1.shape(  
input, name=None, out_type=None  
)
```

```
tf.compat.v1.shape(  
input, name=None, out_type=None  
)
```

```
t = tf.constant([[[[1, 1, 1], [2, 2, 2]], [[3, 3, 3], [4, 4, 4]]]])  
tf.shape(t)  # [2, 2, 3]
```

```
t = tf.constant([[[[1, 1, 1], [2, 2, 2]], [[3, 3, 3], [4, 4, 4]]]])  
tf.shape(t)  # [2, 2, 3]
```

Documentation

Returns the shape of a tensor.

Used in the notebooks

- Generating Images with BigBiGAN

This operation returns a 1-D integer tensor representing the shape of input.

For example:

Returns
