Public API for `tf._api.v2.sparse` namespace

Function Signatures

```
add(...)  
bincount(...)
```

Documentation

Public API for `tf._api.v2.sparse` namespace

Classes

class `SparseConditionalAccumulator`: A conditional accumulator for aggregating sparse gradients.

class `SparseTensor`: Represents a sparse tensor.

Functions

`add(...)`: Adds two tensors, at least one of each is a `SparseTensor`. (deprecated arguments)

`bincount(...)`: Count the number of times an integer value appears in a tensor.

`concat(...)`: Concatenates a list of `SparseTensor` along the specified dimension. (deprecated arguments)

`cross(...)`: Generates sparse cross from a list of sparse and dense tensors.

`cross_hashed(...)`: Generates hashed sparse cross from a list of sparse and dense tensors.

`expand_dims(...)`: Returns a tensor with an length 1 axis inserted at index axis.

`eye(...)`: Creates a two-dimensional sparse tensor with ones along the diagonal.

`fill_empty_rows(...)`: Fills empty rows in the input 2-D `SparseTensor` with a default value.

`from_dense(...)`: Converts a dense tensor into a sparse tensor.

`mask(...)`: Masks elements of `IndexedSlices`.

`matmul(...)`: Multiply `SparseTensor` (or dense Matrix) (of rank 2) "A" by dense matrix

`maximum(...)`: Returns the element-wise max of two `SparseTensors`.

`merge(...)`: Combines a batch of feature ids and values into a single `SparseTensor`. (deprecated)

`minimum(...)`: Returns the element-wise min of two `SparseTensors`.

`placeholder(...)`: Inserts a placeholder for a sparse tensor that will be always fed.

`reduce_max(...)`: Computes `tf.sparse.maximum` of elements across dimensions of a `SparseTensor`. (deprecated arguments) (deprecated arguments)

`reduce_max_sparse(...)`: Computes the max of elements across dimensions of a

SparseTensor. (deprecated arguments)

reduce_sum(...): Computes `tf.sparse.add` of elements across dimensions of a SparseTensor. (deprecated arguments) (deprecated arguments)

reduce_sum_sparse(...): Computes the sum of elements across dimensions of a SparseTensor. (deprecated arguments)

reorder(...): Reorders a SparseTensor into the canonical, row-major ordering.

reset_shape(...): Resets the shape of a SparseTensor with indices and values unchanged.

reshape(...): Reshapes a SparseTensor to represent values in a new dense shape.

retain(...): Retains specified non-empty values within a SparseTensor.

segment_mean(...): Computes the mean along sparse segments of a tensor.

segment_sqrt_n(...): Computes the sum along sparse segments of a tensor divided by the $\sqrt{N}$.

segment_sum(...): Computes the sum along sparse segments of a tensor.

slice(...): Slice a SparseTensor based on the start and size.

softmax(...): Applies softmax to a batched N-D SparseTensor.

sparse_dense_matmul(...): Multiply SparseTensor (or dense Matrix) (of rank 2) "A" by dense matrix

split(...): Split a SparseTensor into `num_split` tensors along `axis`. (deprecated arguments)

to_dense(...): Converts a SparseTensor into a dense tensor.

to_indicator(...): Converts a SparseTensor of ids into a dense bool indicator tensor.

`transpose(...)`: Transposes a SparseTensor.
