

tf.compat.v1.string_to_number Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/string_to_number

Converts each string in the input Tensor to the specified numeric type.

Function Signatures

```
tf.compat.v1.string_to_number( string_tensor=None,  
out_type=tf.dtypes.float32, name=None, input=None )  
tf.strings.to_number(strings)
```

Code Examples

```
tf.compat.v1.string_to_number(  
    string_tensor=None,  
    out_type=tf.dtypes.float32,  
    name=None,  
    input=None  
)
```

```
tf.compat.v1.string_to_number(  
    string_tensor=None,  
    out_type=tf.dtypes.float32,  
    name=None,  
    input=None  
)
```

```
tf.dtypes.float32
```

```
strings = ["5.0", "3.0", "7.0"]  
tf.strings.to_number(strings)
```

```
strings = ["5.0", "3.0", "7.0"]
```

```
tf.strings.to_number(strings)
```

Documentation

Converts each string in the input Tensor to the specified numeric type.

more details.

`tf.compat.v1.strings.to_number`

(Note that int32 overflow results in an error while float overflow results in a rounded value.)

Example:

`## Returns`
