---

*Returns all variables created with trainable=True.*

## Function Signatures

---

```
tf.compat.v1.trainable_variables( scope=None )
```

## Code Examples

---

```
tf.compat.v1.trainable_variables(  
    scope=None  
)
```

```
tf.compat.v1.trainable_variables(  
    scope=None  
)
```

# Documentation

---

Returns all variables created with trainable=True.

## Migrate to TF2

Not compatible with eager execution and tf.function. In particular, Graph collections are deprecated in TF2. Instead please create a tf.Module container for all your model state, including variables.

You can then list all the trainable variables in your tf.Module through the trainable\_variables attribute.

## Description

When passed trainable=True, the Variable() constructor automatically adds new variables to the graph collection GraphKeys.TRAINABLE\_VARIABLES. This convenience function returns the contents of that collection.

## Returns
