

tf.compat.v1.variable_op_scope Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/variable_op_scope

Deprecated: context manager for defining an op that creates variables.

Function Signatures

```
tf.compat.v1.variable_op_scope( values, name_or_scope,  
    default_name=None, initializer=None, regularizer=None,  
    caching_device=None, partitioner=None, custom_getter=None,  
    reuse=None, dtype=None, use_resource=None, constraint=None )
```

Code Examples

```
@tf_contextlib.contextmanager
tf.compat.v1.variable_op_scope(
    values,
    name_or_scope,
    default_name=None,
    initializer=None,
    regularizer=None,
    caching_device=None,
    partitioner=None,
    custom_getter=None,
    reuse=None,
    dtype=None,
    use_resource=None,
    constraint=None
)
```

```
@tf_contextlib.contextmanager
```

```
tf.compat.v1.variable_op_scope(
    values,
    name_or_scope,
    default_name=None,
    initializer=None,
    regularizer=None,
    caching_device=None,
    partitioner=None,
    custom_getter=None,
    reuse=None,
    dtype=None,
    use_resource=None,
    constraint=None
)
```
