

# tf.repeat Stay organized with collections

## Save and categorize content based on your preferences.

[https://www.tensorflow.org/api\\_docs/python/tf/repeat](https://www.tensorflow.org/api_docs/python/tf/repeat)

---

*Repeat elements of input.*

## Function Signatures

---

```
tf.repeat( input, repeats, axis=None, name=None )
```

## Code Examples

---

```
tf.repeat(  
input, repeats, axis=None, name=None  
)
```

```
tf.repeat(  
input, repeats, axis=None, name=None  
)
```

```
repeat(['a', 'b', 'c'], repeats=[3, 0, 2], axis=0)
```

```
repeat(['a', 'b', 'c'], repeats=[3, 0, 2], axis=0)
```

```
numpy=array([b'a', b'a', b'a', b'c', b'c'], dtype=object)>
```

```
repeat([[1, 2], [3, 4]], repeats=[2, 3], axis=0)
```

```
repeat([[1, 2], [3, 4]], repeats=[2, 3], axis=0)
```

# Documentation

---

Repeat elements of input.

## View aliases

Compat aliases for migration

See

Migration guide for  
more details.

`tf.compat.v1.repeat`

## Used in the notebooks

- Transfer learning with YAMNet for environmental sound classification
  - Parametrized Quantum Circuits for Reinforcement Learning
  - Recommend movies for users with TensorFlow Ranking
  - Listwise ranking

See also `tf.concat`, `tf.stack`, `tf.tile`.

## Returns

## Example usage:
