https://www.tensorflow.org/api_docs/python/tf/truncatemod

Returns element-wise remainder of division.

Function Signatures

```
tf.truncatemod( x: Annotated[Any, tf.raw_ops.Any], y:
Annotated[Any, tf.raw_ops.Any], name=None ) -> Annotated[Any,
tf.raw_ops.Any]
```

Code Examples

```
tf.truncatemod(  
  x: Annotated[Any, tf.raw_ops.Any],  
  y: Annotated[Any, tf.raw_ops.Any],  
  name=None  
) -> Annotated[Any, tf.raw_ops.Any]
```

```
tf.truncatemod(  
  x: Annotated[Any, tf.raw_ops.Any],  
  y: Annotated[Any, tf.raw_ops.Any],  
  name=None  
) -> Annotated[Any, tf.raw_ops.Any]
```

```
tf.raw_ops.Any
```

```
tf.raw_ops.Any
```

```
tf.raw_ops.Any
```

Documentation

Returns element-wise remainder of division.

`tf.compat.v1.truncatemod`

This emulates C semantics in that

the result here is consistent with a truncating divide. E.g. `truncate(x / y) * y + truncate_mod(x, y) = x`.

Returns
