

tf.unravel_index Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/unravel_index

Converts an array of flat indices into a tuple of coordinate arrays.

Function Signatures

```
tf.unravel_index( indices: Annotated[Any,
TV_UnravelIndex_Tidx], dims: Annotated[Any,
TV_UnravelIndex_Tidx], name=None ) -> Annotated[Any,
TV_UnravelIndex_Tidx]

y = tf.unravel_index(indices=[2, 5, 7], dims=[3, 3]) # 'dims'
represent a hypothetical (3, 3) tensor of indices: # [[0, 1,
*2*], # [3, 4, *5*], # [6, *7*, 8]] # For each entry from
'indices', this operation returns # its coordinates (marked
with '*'), such as # 2 ==> (0, 2) # 5 ==> (1, 2) # 7 ==> (2,
1) y ==> [[0, 1, 2], [2, 2, 1]]
```

Code Examples

```
tf.unravel_index(
indices: Annotated[Any, TV_UnravelIndex_Tidx],
dims: Annotated[Any, TV_UnravelIndex_Tidx],
name=None
) -> Annotated[Any, TV_UnravelIndex_Tidx]
```

```
tf.unravel_index(  
indices: Annotated[Any, TV_UnravelIndex_Tidx],  
dims: Annotated[Any, TV_UnravelIndex_Tidx],  
name=None  
) -> Annotated[Any, TV_UnravelIndex_Tidx]
```

```
y = tf.unravel_index(indices=[2, 5, 7], dims=[3, 3])  
# 'dims' represent a hypothetical (3, 3) tensor of indices:  
# [[0, 1, *2*],  
#  [3, 4, *5*],  
#  [6, *7*, 8]]  
# For each entry from 'indices', this operation returns  
# its coordinates (marked with '*'), such as  
# 2 ==> (0, 2)  
# 5 ==> (1, 2)  
# 7 ==> (2, 1)  
y ==> [[0, 1, 2], [2, 2, 1]]
```

```
y = tf.unravel_index(indices=[2, 5, 7], dims=[3, 3])  
# 'dims' represent a hypothetical (3, 3) tensor of indices:  
# [[0, 1, *2*],  
#  [3, 4, *5*],  
#  [6, *7*, 8]]  
# For each entry from 'indices', this operation returns  
# its coordinates (marked with '*'), such as  
# 2 ==> (0, 2)  
# 5 ==> (1, 2)  
# 7 ==> (2, 1)  
y ==> [[0, 1, 2], [2, 2, 1]]
```

Documentation

Converts an array of flat indices into a tuple of coordinate arrays.
