Chi Square Distribution

[< Previous](#)[Next >](#)

Chi Square Distribution

Chi Square distribution is used as a basis to verify the hypothesis.

It has two parameters:

df - (degree of freedom).

NumPy ufunc

[ufunc Intro](#)

Example

[Get your own Python Server](#)

Draw out a sample for chi squared distribution with degree of freedom 2 with size 2x3:

```
from numpy import random

x = random.chisquare(df=2, size=(2, 3))

print(x)
```

Exercise ?

The `random.chisquare()` method has two parameters, which ones?

- ☐ n and size
- ☐ df and size
- ☐ scale and size

Submit Answer »
