Python statistics Module

Python has a built-in module that you can use to calculate mathematical statistics of numeric data.

The `statistics` module was new in Python 3.4.

Statistics Methods

Method	Description
<code>statistics.harmonic_mean()</code>	Calculates the harmonic mean (central location) of the given data
<code>statistics.mean()</code>	Calculates the mean (average) of the given data
<code>statistics.median()</code>	Calculates the median (middle value) of the given data
<code>statistics.median_grouped()</code>	Calculates the median of grouped continuous data
<code>statistics.median_high()</code>	Calculates the high median of the given data
<code>statistics.median_low()</code>	Calculates the low median of the given data
<code>statistics.mode()</code>	Calculates the mode (central tendency) of the given numeric or nominal data
<code>statistics.pstdev()</code>	Calculates the standard deviation from an entire population

COLOR
PICKER

<code>statistics.stdev()</code>	Calculates the standard deviation from a sample of data
<code>statistics.pvariance()</code>	Calculates the variance of an entire population
<code>statistics.variance()</code>	Calculates the variance from a sample of data
