https://www.tensorflow.org/api_docs/python/tf/Variable/SaveSliceInfo

Information on how to save this Variable as a slice.

Function Signatures

```
tf.Variable.SaveSliceInfo( full_name=None, full_shape=None,  
var_offset=None, var_shape=None, save_slice_info_def=None,  
import_scope=None )
```

Code Examples

```
tf.Variable.SaveSliceInfo(  
    full_name=None,  
    full_shape=None,  
    var_offset=None,  
    var_shape=None,  
    save_slice_info_def=None,  
    import_scope=None  
)
```

```
tf.Variable.SaveSliceInfo(  
    full_name=None,  
    full_shape=None,  
    var_offset=None,  
    var_shape=None,  
    save_slice_info_def=None,  
    import_scope=None  
)
```

```
to_proto(  
    export_scope=None  
)
```

```
to_proto(  
    export_scope=None  
)
```

Main aliases

`tf.experimental.dtensor.DVariable.SaveSliceInfo`

See

Migration guide for
more details.

`tf.compat.v1.Variable.SaveSliceInfo`

Provides internal support for saving variables as slices of a larger variable. This API is not public and is subject to change.

Available properties:

- `full_name`
- `full_shape`
- `var_offset`
- `var_shape`

Attributes

`## Methods`

`to_proto`

[View source](#)

Returns a `SaveSliceInfoDef()` proto.
